

## HIGHLIGHTS

- > Industry leading Continuous Data Protection software for the Windows® environment
- > Monitoring and protection of data locally, over an Intranet, home network or Internet
- > Simple, user-friendly wizard-driven GUI
- > Extensive status monitoring and progress display
- > Secure safekeeping of data
- > Extremely space-efficient and network-efficient solution – runs on the local machine with no agents or clients needed
- > PowerSave™ mode for notebook PCs conserves battery life by limiting backup tasks
- > Support for cloud storage services such as Amazon S3\*

SafeTrends™ from American Megatrends is a breakthrough standalone Continuous Data Protection (CDP) software suite for Windows® environments that offers complete protection of important digital media. It provides outstanding data protection and the ultimate in flexibility for data backup.

SafeTrends safeguards your digital life with the flexibility to choose what to save, and when and where to save it, with options for both Local and Remote backups. SafeTrends also can specify how many versions of a specific file or folder to save, and features an Event Log to review activity and fine tune performance.

SafeTrends employs a variety of innovations to backup and restore important data, by continually monitoring changes in selected files, and backing them up on one or more selected locations on the local machine, home network, corporate intranet or cloud storage services. It also includes the useful PowerSave™ mode to adjust backup tasks when a notebook PC is disconnected from its AC power source to conserve battery life.

Take advantage of unused storage space on local machines or storage appliances and put them to use by configuring SafeTrends to allocate these

locations for backup storage. Subscribers to cloud storage services such as Amazon S3 can connect to cloud accounts and use these data stores as a designated location for SafeTrends backup.\* SafeTrends will automatically monitor and copy changed data to any and all selected locations at a scheduled interval. When making backups over the network, SafeTrends employs data deduplication and compresses and encrypts data for safe, quick transmission and low file sizes.

SafeTrends has a streamlined GUI and intuitive configuration wizards to make it a very powerful tool, even in the hands of a new user. Use the intuitive Recovery Wizard featured in SafeTrends to restore lost data in the event of data corruption, power outage, or similar catastrophe.

Since it runs locally on a Windows® desktop or notebook PC, SafeTrends does not require any agents or additional software to be installed on another server in order to function. To get up and running with SafeTrends for the first time, simply install the software, spend a few minutes to configure the backup and protection options, then enjoy the peace-of mind that comes with complete and continuous data protection.

## Features

# SafeTrends™

## Continuous Data Protection Software for Windows®

### SafeTrends™ Continuous Data Protection Software for Windows®

#### Product Highlights:

- Continuous monitoring and protection of files and folders
- Scheduled and continuous local and remote data backup
- Easy-to-use GUI and Setup Wizards for configuration and monitoring
- Extensive Recovery Wizard allows for guided recovery of missing data
- Hassle-free operation without the need for any administrative help
- No installation required on remote systems
- Secure, fast transfers of backup data using data encryption and compression
- Protection in Peer and Home Networks
- Protection and backup on File Shares
- Concurrent protection and recovery tasks
- Event logging and alert management
- Detailed status and progress monitoring window
- Retains access rights and protects against separate local folders
- Support for Quota and Versioning
- Adjust behavior for three defined battery level ranges (low, medium, and high) with PowerSave™ mode for notebook PCs

#### Protection Features:

- Continuous protection of Files and Folders on any Windows® system
- Easy to use Protection Wizard for guided protection configuration
- Up to four separate protection tasks supported
- Up to four independent locations monitored per task (folders and sub-folders)
- Extensive selection criteria using File Filters for fine-grained control of protected files
- Protection in local folders for fast recovery from logical errors
- Continuous and Trickle protection over local Network (Intranet) File Shares

- Continuous and Trickle protection over Peer and Home Network
- Built-in support for Amazon S3 cloud storage services\*
- Secure Transfer and storage using data encryption
- Sophisticated data reduction technology for reduced transfer time and efficient storage space usage, with data compression and fine-grained deduplication
- Functional even when network link is down
- Large files supported via fragmented attachments
- Pausing and restarting of protection tasks

#### Recovery Features:

- Integrated tool for recovering one or more files (and any version of a file)
- Simple Recovery Wizard for quick, guided recovery and fast Recovery Time Objective (RTO)
- Fast recovery from local folder
- Recovery from remote shares and Peer/Home Network
- Extensive status and progress display
- Continuous Data Protection even during recovery action
- Restoration of content and access control information

#### Events, Alerts and Monitoring Tools:

- All important events are time-stamped and logged

- Integrated Event Viewer allows easy access and display of events
- Graphical tools allows detailed display of protection statistics
- Separate progress indicators for Protection and Restore operations
- Use PowerSave™ mode to set CPU thresholds to reduce CPU load and conserve power
- “Force Backup” option in PowerSave™ mode can override battery preferences at any time
