

Innovative Data Protection Solutions

The Perfect Backup for SMBs/SMEs

- Turnkey **single appliance** solution
 - **Unlimited** number of clients
- Fully **automated** disk-based backups
- **Data deduplication** storage optimization
- **Remote byte-level replication** for DR
 - **Active Directory** support
 - **Exchange** Agent and **SQL** Agent
 - Rapid, **reliable** data recovery
 - **Multiple** client editing
- Augments and backs-up existing **SANs**
 - Significantly **reduced** backup times
- **Offsite archival** with removable disk
- **Easy** implementation and management
- Intuitive, **Web 2.0** browser-based GUI
- Support for **all** major operating systems
 - **No additional** site or per-user fees
 - Utilize uncommitted storage
 - And much more

Data protection starting at \$2,595

It's no secret – the loss of vital business data can kill or cripple an organization. Mission-critical information requires 100% accessibility and restorability at any given moment. What is particularly alarming, however, is what little is done to protect business-critical data at the average organization, particularly the small to medium-sized business (SMB) or enterprise (SME). Many SMBs put themselves at great risk because they struggle to find a data protection solution that meets their unique needs.

Revinetix meets the data protection challenges faced by SMBs with innovative data protection software integrated with best-of-class, disk-based hardware. The result is a turn-key appliance fully installed, configured and ready for seamless deployment within your existing IT infrastructure.

Disk2Disk2Disk® Technology

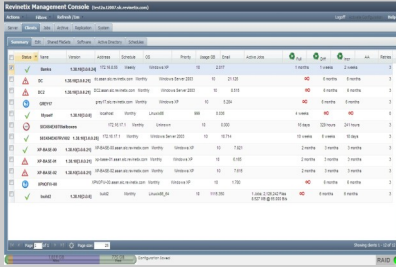

The Disk2Disk2Disk® (D2D2D®) backup philosophy is a distinguishing advantage of Revinetix' solutions. Revinetix delivers affordable, total disk-based backup products that eliminate the traditional weak link of data protection: slow, failure-prone tapes. In today's economy where many businesses operate 24/7 and system downtime is intolerable, a premium exists for accomplishing backups and restores quickly and reliably.

Advanced Data Protection Software

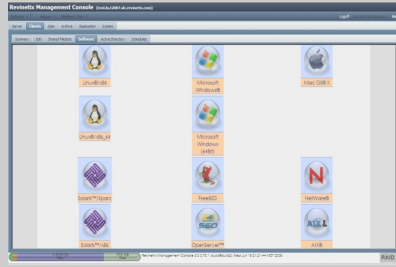

Revinetix believes backup software should not only be full-featured, but simple-to-use and affordable to own. With this in mind, each Revinetix data protection appliance comes pre-loaded with all the client software needed to back up an entire local area network (LAN).

No need to install additional programs or buy additional client licenses. And so intuitive is Revinetix' backup software environment that a novice user can setup an appliance in less than an hour and begin taking advantage of enterprise-class data protection in no time flat.

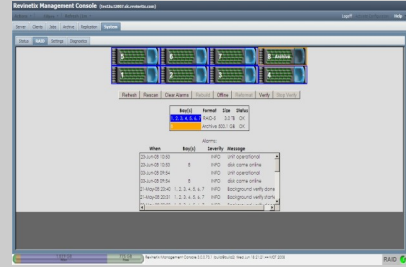

ARCHIVE DISK REMOVAL

SUPPORTED AGENTS

RAID CONTROL

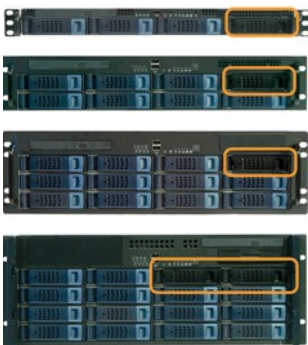

Hardware and Configuration

To ensure reliability and performance, Revinetix' products are built around 'best of breed' hardware technology. Typically, this includes dual Intel processors, Gigabit and Fast Ethernet controllers, hardware RAID (Redundant Array of Inexpensive Disks), dual-redundant power supplies, and high speed Serial ATA (SATA) disks. For a complete disaster proof solution, these hot-swappable SATA disks are capable of being ejected from the backup appliance and physically taken offsite.

SENTIO™ PRO

Removable Archive Drives

VOLO™ PRO 500 / 1000

Revinetix products come in desktop cube, 1U, 2U, 3U, 4U, and 8U rack-mount chassis to support storage capacities ranging from 500GB up to 80TB.

Other key features include:

Exchange Agent — A native Microsoft Exchange Server Agent is available to view, select and restore individual emails and/or mailboxes from live Exchange server databases based on search criteria. This enables users to confidently backup and restore Exchange messaging quickly from disk -- helping address government email retention guidelines, such as Sarbanes-Oxley, HIPAA, and other regulations.

BMR — Revinetix products include basic Bare Metal Restore (BMR) software. By creating a complete disk image to be stored on the the appliance, the basic BMR software can quickly add new users, or get users back up and productive after a fatal system crash.

NAS — Revinetix RevOS software has built-in Network Attached Storage (NAS) capabilities that allow users to quickly and easily add storage capacity for RAID-protected file sharing.
